| Program Explanation | <p>It is the responsibility of Marietta Water to supply our customers with quality potable water. For this reason, and to comply with the Standard Plumbing Codes and the Georgia Rules for Safe Drinking Water, Marietta Water has developed a backflow prevention program. This program recognizes that all water users have plumbing fixtures with the potential for allowing contaminants or impurities to accidentally enter the potable water system. The purpose of this program is to protect the public from backflow of contaminated water into the potable water system, by requiring the installation of a backflow prevention device on the customer's side of the service connection. Marietta Water will notify you of the requirements for your facility. Each customer, unless otherwise notified, shall be responsible for the installation and all cost associated with test and maintenance requirements for the device(s).</p> <p>Thermal Expansion - When water is heated and stored in a customer's water system that has been closed by installation of a backflow prevention device, pressure buildup from thermal expansion has the potential to cause damage to plumbing and/or appliances. An approved auxiliary relief valve or expansion chamber should be installed to limit thermal expansion of the water being heated to protect fixtures on the system. This will prevent leaking and/or damage. The installation of such a device shall be in accordance with Plumbing Codes and shall be the responsibility of the customer. It is the policy of Marietta Water to notify the customer of thermal expansion. Marietta Water is not responsible for damages occurring inside the customer's water system.</p> <p>NOTE : Backflow prevention devices need to be tested and copies of test forms returned to our office on a yearly basis.</p> |
